

Adolescent Prescription Drug Misuse in Arkansas

Misuse of prescription drugs by Arkansas youth is a serious health and safety problem...

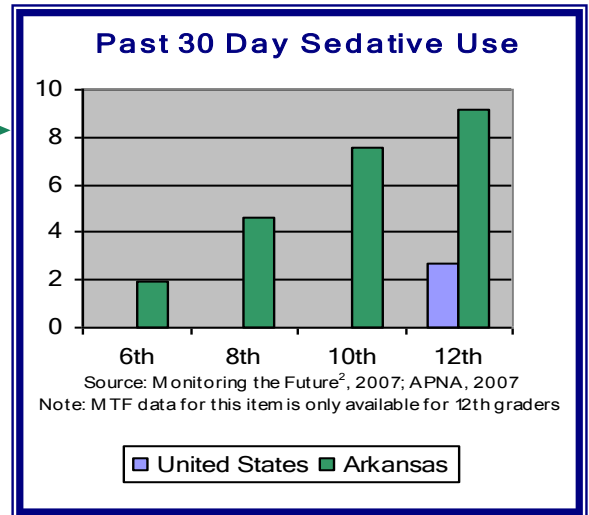

Of the over 88,000 Arkansas students (grades 6, 8, 10, and 12) who participated in the 2007 Arkansas Prevention Needs Assessment (APNA) survey¹,

- 12.2% have taken a sedative (such as Valium, Xanax, or sleeping pills) without a doctor telling them to – 5.5% have done so in the past 30 days
- 3.1% have taken stimulants (such as Ritalin) without a doctor's order

Other facts about adolescent prescription drug misuse in Arkansas...

- Females are more likely to have used sedatives than males
- The National Survey on Drug Use and Health³ shows that past-year non-medical use of prescription painkillers among Arkansas youth has been on the rise since 2002⁴

Type of Drug	Examples
Narcotics (painkillers)	OxyContin, Vicodin, codeine, Percocet
Sedatives/Tranquilizers	Valium, Xanax
Stimulants	Ritalin, Adderall

The rate of past 30 day sedative use among Arkansas youth is roughly three times that of the national rate

Consequences of prescription drug misuse are serious...

- Serious injuries, illness, and even death can occur
- There is no way to predict how a person will react to a medication not prescribed to them
- Mixing prescription drugs with alcohol and street drugs is particularly risky

Teens say they get prescription drugs from home, people they know, and the internet⁵

Follow these steps to reduce the risk of prescription drug misuse among teens:

- Talk to youth about following instructions when taking medicine, and remind them that it's never okay to share medication with someone or to take someone else's medication
- Set the record straight—tell youth that prescription drugs can be just as dangerous as street drugs when used inappropriately
- Stress is often cited as a reason for teens to use; Talk with your teen about safe ways to reduce stress
- Keep prescription medications locked up where children and youth can't access them
- Mix expired or unused prescriptions with a material like coffee grounds or kitty litter before throwing them away, to deter youth from taking them from the trash (never flush them down the toilet—this pollutes the drinking water supply)
- Monitor adolescents' online activities—many web sites don't even require a prescription
